Description

Process up to 12 samples at one time
Non-stop processing with no cool-down between runs
No cross-contamination
Small footprint

Powerful, fast, and economical, the Omni Bead Ruptor 12 is ideal for many applications that require grinding, lysing, or homogenization of biological samples prior to molecular extraction. Convenient disposable sample tubes come pre-filled with a variety of lysing beads. Up to twelve 2 mL and/or four 7 mL tubes can be processed at once for efficient and consistent high-yield homogenization. Unlike many bead mill homogenizers, the Bead Ruptor 12 does not require a cool-down period between runs. This means more samples can be processed in a smaller amount of time. Tubes are easily loaded into the angled, front-facing holder for optimal bead/sample interactions.

Comes with our 90-day warranty.
